MARKETABLE PHOSPHATE ROCK IN APRIL 2003

U.S. marketable phosphate rock production in April decreased 11% from the previous month, according to the U.S. Geological Survey (USGS). Annualized production for 2003 was estimated to be 31.8 million metric tons (Mt), which was about 10% lower than in 2002.

Domestic phosphate rock sold or used in April decreased by 12% from March, to 2.75 Mt. Annualized sales or use for the year was estimated to be 35 Mt, which was higher than in 2002. U.S. producer ending stocks for April fell 5% from those in the prior month.

Some phosphate rock import data for Morocco, the largest supplier, were suppressed by the U.S. Census Bureau. In addition, Census trade data are not available for the current month. Based on Census figures and data from the Moroccan producer, the USGS estimates that imports of phosphate rock in 2002 were 2.7 Mt or an average of 225,000 tons per month.

Domestic consumption for 2003 was estimated to be 37.7 Mt, using annualized sales and use data and estimated trade data. Apparent domestic consumption for 2002 calculated from the sum of home deliveries and adjusted trade data was 37.5 Mt.
